

WTW Cyber Defender provides stronger resilience against cyberattacks

WTW and Truesec have joined forces and created WTW Cyber Defender that reduces the risk of a cyberattack and limits its consequences.

By Martin Wex

The cyber threat against Danish companies is very high. This is the assessment of the Danish Centre for Cyber Security. The number of companies exposed to cyberattacks and other forms of data security breaches has been increasing rapidly in recent years — and the consequences for the companies affected are severe and often result in costs in the millions in loss of revenue and expenses to restore operations.

Truesec, a cybersecurity expert, and WTW, a cyber insurance expert, have joined forces and created WTW Cyber Defender, which offers enhanced cybersecurity.

»WTW Cyber Defender is made up of six elements, each of which helps to strengthen the company's cybersecurity. All combined, these elements provide the best prerequisite for preventing damage and avoiding losses due to data security breaches, « says CEO Morten von Seelen of Truesec.

Insurance analysis

WTW performs a thorough analysis of the company's cyber insurance needs. The price is individual and to be agreed with WTW.

Risk analysis

Truesec performs a comprehensive analysis of the company's exposure to data security breaches. There are four models, which are described in more detail in the brochure.

Risk advice

Truesec offers advice on preventive measures that reduce the risk of a cyberattack and limit the consequences of a data security breach. The price is individual and to be agreed with Truesec.

Cyber insurance

WTW conducts a tender for the company's cyber insurance and selects the insurer that can offer the best terms at the most attractive price.

Crisis management

Truesec implements the necessary measures to stop the attack when a data security breach occurs and activates the appropriate resources to ensure a quick restoration of operations.

Claims handling

WTW assists with advice and guidance when damage occurs and represents the company in the dialogue with the insurance company.

Customers can buy the full package or settle for the elements that are relevant to the individual company.

Cyber security is in focus

Many companies have understood the severity and made serious efforts to increase IT security. Unfortunately, cybercriminals are constantly developing new and more sophisticated methods of breaking into IT networks – and continuously improving their abilities to identify sensitive data that they either encrypt or threaten to publish unless the company pays a substantial ransom.

"

WTW Cyber Defender covers the full spectrum from prevention to insurance to crisis management

Torben Højlund | Executive Vice President

The constant pressure from well-organized hacker groups from around the world places great demands on all organizations to create and maintain a high level of cyber security — and to have the necessary processes and insurance coverage in place to handle data security breaches.

»WTW Cyber Defender covers the full spectrum from prevention to insurance to crisis management, with Truesec and WTW each bringing in their special abilities and level of expertise to decrease the risk of a

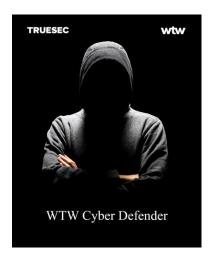

cyberattack and to reduce the consequences, « says Executive Vice President Torben Højlund of WTW.
