Long-term statistics

Historic economic and
investment indices

On the following pages, we set out details of bank rates, shares, rates of inflation, retail prices, index of real earnings, deposits, returns, dividends and pensions.

Since 2011, the Consumer Prices Index (CPI) has been used rather than the Retail Prices Index (RPI) to set minimum increases for occupational pensions. How a scheme is affected depends on how its rules are written: some pension increases will now be based on CPI while others will continue to be based on RPI.

In many cases, increases will be based on CPI before a member's benefits come into payment and on RPI thereafter. In this issue we have adjusted the nominal data with respect to both RPI and CPI.

Rate of inflation

Figure 1.1. shows the annual rate of inflation as at December each year from 1900 to 2023, based on a series of cost of living indices and RPI over the whole period and CPI from December 1988.

Figure 2.1. gives the percentage increase in the General Index of Retail Prices and the General Index of Consumer Prices over periods of one, five, ten and twenty years, ending in December each year from 1993 to 2023.

Figure 1.1 Rate of inflation

Figure 2.1. Retail Prices and Consumer Prices

Year	Increase % per year in General Index of Retail Prices				Increase % per year in General Index of Consumer Prices			
	Over past year	Over past 5 years	Over past 10 years	Over past 20 years	Over past year	Over past 5 years	Over past 10 years	Over past 20 years
1993	1.94	5.17	5.03	9.10	2.48	-	-	-

Alternative measures of inflation

Figure 1.2. shows the annual rate of inflation as at every month end each year from 2006 to 2023, based on the RPI, CPI and CPIH indices.

Figure 2.2. gives the percentage increase in the RPI, CPI and CPIH indices over periods of one and five years, ending in December each year from 2006 to 2023.

Figure 1.2. Alternative measures of inflation

Figure 2.2. RPI, CPI and CPI-H

Year	Increase % per year in RPI			Increase % per year in CPI			Increase % per year in CPIH		
	Over past year	Over past 5 years	Over past 10 years	Over past year	Over past 5 years	Over past 10 years	Over past year	Over past 5 years	Over past 10 years

Wages/earnings

Figure 3. shows an index of real earnings constructed by joining together various indices of wages and earnings over the period and dividing by the price indices shown in Figure 2.1. The teal line depicts the indices of real earnings as at December each year from 1900 to 2023 relative to RPI, while the violet line depicts the indices of real earnings as at December each year from 1988 to 2023 relative to CPI.

Figure 3. Average wages/earnings

Figure 4.1. gives the percentage increase in the earnings index over periods of one, five, ten and twenty years, ending in December

each year, from 1988 to 2009. The first column shows the percentage increase in the nominal index. The second and the third columns show

the percentage increase in the real index, relative to retail prices and consumer prices respectively. All figures have been shown on the seasonally adjusted basis.

Figure 4.1. Average Earnings Index

Year	Nominal increase % per year in earnings index				Real increase % per year in earnings index (relative to retail prices)				Real increase % per year in earnings index (relative to consumer prices)			
	Over past year	Over past 5 years	Over past 10 years	Over past 20 years	Over past year	Over past 5 years	Over past 10 years	Over past 20 years	Over past year	Over past 5 years	Over past 10 years	Over past 20 years

2010	Average Earnings Index (AEI) has been superseded by Average Weekly Earnings (AWE) as the lead measure of short-term earnings growth. The Office of National Statistics discontinued publishing AEI after August 2010.											

Figure 4.2. gives the percentage increase in the average weekly earnings over periods of one, five and ten years, ending in December each year, from 2001 to 2023. The first column shows the percentage increase in the nominal average weekly earnings. The second

and the third columns show the percentage increase in the real average weekly earnings, relative to retail prices and consumer prices respectively. All figures have been shown on the seasonally adjusted basis; comparisons with earlier editions of *Long-term statistics* may show small differences.

This data series is subject to review by the Office for National Statistics on a periodic basis. The figures shown reflect the review undertaken in July 2023 to the seasonal adjustment process, which affects all prior periods.

Figure 4.2. **Average Weekly Earnings**

Year	Nominal increase % per year in average weekly earnings			Real increase % per year in average weekly earnings (relative to retail prices)			Real increase % per year in average weekly earnings (relative to consumer prices)		
	Over past year	Over past 5 years	Over past 10 years	Over past year	Over past 5 years	Over past 10 years	Over past year	Over past 5 years	Over past 10 years

Interest rates

Figure 5. shows various interest rates at the end of each quarter from 1900 to 2023.

The violet line shows short-term interest rates represented successively by the bank rate, the minimum lending rate and bank base rates. Long-term interest rates are shown by the teal line, represented by the yield on 2.5% Consols up to 1977, then by the yield on FTSE Actuaries Government Securities Irredeemable stocks up to 2014 and thereafter by the yield on FTSE Actuaries Government Securities 45 years stock. Also shown, by the pink line, are yields on index-linked stocks, using the real yields (assuming 5% inflation) from the FTSE Actuaries Government Securities Index-linked indices for all stocks up to March 1986 and for stocks of over five years' duration thereafter.

Figure 5. **Interest rates**

Dividend yields

Figure 6. shows the gross and net dividend yields on ordinary shares and compares them with long-term interest rates. The latter (shown by the teal line) is the same as the graph of long-term interest rates shown above. The gross dividend yield on ordinary shares up to September 1997 is shown by the violet line.

This is based from 1919 to 1923 on values of the index published by stockbrokers de Zoete. Thereafter, values at the end of each quarter are used; from 1924 to March 1962, these are taken from various older actuaries indices. From June 1962 onwards, the dividend yield on the FTSE Actuaries All-Share Index is used. The net dividend yield is shown by the teal line, constructed by reducing the gross dividend yield by the rate of advanced corporation tax between April 1973 and August 1997 and using the actual published yield thereafter.

Figure 6. **Dividend yields**

Figure 7. Accumulated real return on short-term fixed interest deposits

Fixed interest returns: short term

Figure 7. shows an index of the accumulated real return on short-term fixed interest deposits at the end of each quarter from 1900 to 2023, with returns obtained by dividing short-term fixed interest returns by the RPI and from 1988 to 2023 with returns obtained by dividing short-term fixed interest returns by the CPI shown in Figure 2.1. Up to December 1972, the interest rates used are those described under interest rates in Figure 5. From 1973 to December 1991, the return is based on Local Authority seven-day deposit rates; thereafter, the accumulation is based on the London Interbank BID (LIBID) seven-day notice rate. The accumulated money return allows for gross interest income.

Figure 8. gives the percentage returns on short-term fixed interest investment over periods of one, five, ten and twenty years, ending in December each year from 1997 to 2023.

The first column shows the percentage rates of nominal return, and the second and third columns show the percentage rates of real return, relative to retail prices and consumer prices respectively.

Figure 8. Fixed interest returns: short-term

Year	Nominal increase % per year				Real return % per year relative to retail prices				Real return % per year relative to consumer prices			
	Over past year	Over past 5 years	Over past 10 years	Over past 20 years	Over past year	Over past 5 years	Over past 10 years	Over past 20 years	Over past year	Over past 5 years	Over past 10 years	Over past 20 years

Fixed interest returns: long-term

Figure 9. shows an index of the accumulated real return on long-term fixed interest stocks at the end of each quarter from 1900 to 2023, with returns obtained by dividing long-term fixed interest returns by the RPI, and from 1988 to 2023 with returns obtained by dividing long-term fixed interest returns by the CPI, shown in Figure 2.1. Up to December 1980, the accumulated returns are based on the interest rates described under interest rates in Figure 5; thereafter, they are based on the FTSE Actuaries British Government Securities Over 15 Years Index. The accumulated money return allows for gross interest income and for changes in the capital values of stocks.

Figure 9. Accumulated real return on long-term fixed interest deposits

Figure 10. gives the percentage returns on long-term fixed interest investment over periods of one, five, ten and twenty years, ending

in December each year from 1996 to 2023. The first column shows the percentage rates of nominal return, and the second and third columns

show the percentage rates of real return, relative to retail prices and consumer prices respectively.

Figure 11. **Accumulated real return on index-linked stocks**

Index-linked returns

Figure 11. shows an index of accumulated real return on index-linked stocks at the end of each quarter from June 1981 to December 2023, with returns obtained by dividing index-linked returns by the RPI, and from January 1988 to December 2023 with returns obtained by dividing index-linked returns by the CPI shown in Figure 2.1. The index used is the FTSE Actuaries Government Securities Index-linked Index (all stocks, assuming 5% inflation). The accumulated money return allows for gross interest income and for changes in the capital values of stocks.

Figure 12. gives the percentage returns on index-linked investments over periods of one, five, ten and twenty years, ending in December

each year from 1996 to 2023. The first column shows the percentage rates of nominal return, and the second and third columns show

the percentage rates of real return, relative to retail prices and consumer prices respectively.

Spreads of corporate bond yields over gilts

Figure 13. shows how the additional yield available on corporate bonds over gilts has varied since 1988, for various bond credit ratings. The spreads have been calculated by differencing the UBS Warburg Over 10 Year Corporate Bond Index (for the relevant bond rating) and the UBS Warburg Over 10 Year Gilt Index before 1998, and by differencing the iBoxx Over 10 Year Corporate Bond Index (for the relevant bond rating) and the iBoxx Over 10 Year Gilt Index after 1998.

Figure 13. Spreads of corporate bond yields over gilts

Accumulated returns on corporate bonds and gilts

Figure 14. shows an index of the total returns on AA-rated corporate bonds since 1988 compared to an index of returns on gilts of similar duration. Interest income is assumed to be reinvested in the respective indices. The indices used are the same as those in Figure 13.

Figure 14. Accumulated returns (income re-invested)

Corporate bonds

Figure 15. gives the percentage increase in the AA Corporate Bonds Index over periods of one, five and ten years, ending in December

each year, from 1998 to 2023. The first column shows the percentage increase in the nominal index. The second and third columns show the

increase in the real index, relative to retail prices and consumer prices respectively. The figure uses the iBoxx Over 10 Year Index.

Real dividends from ordinary shares and company earnings

The orange line in *Figure 16* shows an index of real net dividends on ordinary shares from 1950 to 2023, constructed by linking together the share indices described under dividend yields in *Figure 6*, and dividing by the RPI. The pink line shows the corresponding index of real net dividends divided by CPI for the period from 1988 to 2023.

The dividend index in nominal values has been obtained by multiplying the value of the share indices described in *Figure 6*, by the net dividend yield. The indices of real share dividends are then obtained by dividing the share resulting dividend index by the RPI and CPI.

The teal line shows an index of company earnings divided by the RPI and the violet line show an index of company earnings divided by the CPI. The index of company earnings is based on the FTSE Actuaries 500 Share Index from April 1962 and the FTSE Actuaries All-Share Index from January 1993.

Figure 16. Index of real company earnings and real net share dividends

Figure 17. gives the percentage increase in the net dividend index on ordinary shares over periods of one, five, ten and twenty years, ending in December each year from 1988 to 2023. The first column shows the

percentage increase in the nominal index, and the second and third columns show the percentage increase in the real index, relative to retail prices and consumer prices respectively.

Price/earnings ratio

Figure 18. shows the price of equity shares as a ratio of company earnings from June 1962 to December 2023 based on the FTSE Actuaries 500 Share Index until March 1994 and the FTSE Actuaries All-Share Index thereafter.

Figure 18. Price/earnings ratio

Dividend cover

Figure 19. shows the number of times that the net dividends were covered by company earnings from June 1962 to December 2023 based on the FTSE Actuaries 500 Share Index until March 1994 and the FTSE Actuaries All-Share Index thereafter.

Figure 19. Dividend cover

Figure 20. **Accumulated real return on UK ordinary shares (based on net dividends)**

UK ordinary share returns

Figure 20. shows an index of the accumulated real return on UK ordinary shares at the end of each quarter from 1919 to 2023, with returns obtained by dividing the UK ordinary share returns by the RPI, and from 1988 to 2023 with returns obtained by dividing the UK ordinary share returns by the CPI shown in Figure 2.1. The share indices used are those described under dividend yields in Figure 6. The accumulated money return allows for net dividend income and for changes in the capital value of shares.

Figure 21. is based on dividends received by pension funds (including reclaimed Advanced Corporation Tax up to June 1997) and gives the percentage returns

on ordinary share investment over periods of one, five, ten and twenty years, ending in December each year from 1997 to 2023. The first column shows the percentage rates of

nominal return, and the second and third columns show the rates of real return, relative to retail prices and consumer prices respectively.

Overseas ordinary share returns

Figure 22. shows an index of the accumulated real return on overseas shares at the end of each month from 1994 to 2023. It is based on the FTSE All-World Ex UK Total Return Index. The accumulated money return allows for net dividend income and for changes in the capital value of shares. The real return is obtained by dividing the overseas ordinary share returns by the indices of UK retail prices and consumer prices shown in Figure 2.1.

Figure 23. gives the percentage returns on overseas share investment over periods of one, five, ten and twenty years, ending in December each year from 1997 to 2023. The first column shows the percentage rates of nominal return, and the second and third columns show the percentage rates of real return, relative to retail prices and consumer prices respectively.

Figure 24. **Accumulated real return on property**

Property returns

Figure 24. shows an index of the accumulated real return on UK property at the end of each quarter from 1973 to 2023, with returns obtained by dividing property returns by the RPI and from 1988 to 2023 with returns obtained by dividing property returns by the CPI shown in Figure 2.1. The index used from 2016 onwards is the IPD UK Property Returns Index — Standing Investment. The Jones Lang LaSalle Index was used between 1978 and 2015. Prior to 1978, actual returns achieved by pension funds have been used. The real return is obtained by dividing property returns by the retail and consumer price indices shown in Figure 2.1.

Figure 25. gives the percentage returns on property investment over periods of one, five, ten and twenty years, ending in December

each year, from 1996 to 2023. The first column shows the percentage rates of nominal return, and the second and third columns show

the percentage rates of real return, relative to retail prices and consumer prices respectively.

Figure 25. **Property returns**

Pension increases

Figure 26.1. and Figure 26.2. show the Willis Towers Watson Index of Pension Increases, which is based on analysis of schemes operated by major private sector companies covering the whole spectrum of the economy. Only schemes with a minimum of 2,000 pensioners and which do not promise full indexation have been included. In total, the index now represents the experience of around 800,000 pensioners. The Index is calculated by weighting the increase given by each scheme for pensions in excess of the Guaranteed Minimum Pension by the number of pensioners involved. Shown on the left-hand scale are the average nominal pension increases given each year from 1985 to 2023, alongside the annual increases in the RPI and CPI. Shown on the right-hand scale is a cumulative index of real pension increases over the whole period relative to retail prices and consumer prices.

Figure 26.1. Pension increases relative to RPI

Figure 26.2. Pension increases — CPI

Figure 27. gives the percentage increases in pensions over periods of one, five, ten and twenty years, ending in December each year, from 1988 to 2023. The first column shows the percentage

rates of nominal increases, and the second and third columns show the percentage rates of real increases relative to retail prices and consumer prices respectively.

Figure 27. Pension increases

Year	Nominal increase % per year				Real increase % per year relative to retail prices				Real increase % per year relative to consumer prices			
	Over past year	Over past 5 years	Over past 10 years	Over past 20 years	Over past year	Over past 5 years	Over past 10 years	Over past 20 years	Over past year	Over past 5 years	Over past 10 years	Over past 20 years
