WTWRRG Analytics

From Data to Insight to action

We live in the world of Big Data, seemingly able to measure anything and everything every way imaginable. At WTWRRG, we focus our efforts on identifying patterns relating to shipments of household goods and claims that occasionally occur.

Data collected in RADAR allow us to understand the who, what, where, when and how of both shipments and claims. From this data and analysis it becomes easier to identify the why.
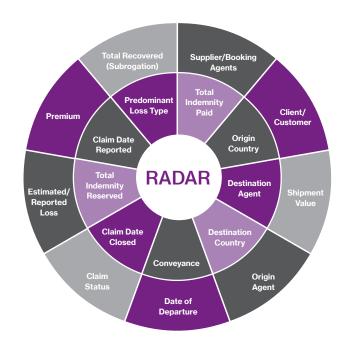

Through the development of our proprietary tool "RADAR", we are able to capture data that is relevant to both the shipment and claim process. Our system is:

- the centerpiece of our Risk Management Methodology
- purpose-built to our specifications
- able to collect and analyze 19+ primary data points
- supportive of network/partner/agent performance management
- data driven, providing "drill-down" capability and context
- built on a secure and PII audit compliant platform

This information, combined with analytical tools, skills and methods, allow us to build a comprehensive picture of individual losses as well as trends and patterns. Ask us about our analytical capabilities.

RADAR

- Total Recovered (Subrogation)
- Supplier/Booking Agents
- Predominant Loss Type
- Total Indemnity Paid
- Premium
- Client/Customer
- Claim Date Reported
- Origin Country
